ABSTRACT OF THE DISCLOSURE

There is a provided apparatus for processing data, said apparatus comprising:

a processor operable in a plurality modes and either a secure domain or a non-

5   secure domain including:

at least one secure mode being a mode in said secure domain; and

at least one non-secure mode being a mode in said non-secure domain;

wherein

when said processor is executing a program in a secure mode said program has

10   access to secure data which is not accessible when said processor is operating in a

non-secure mode;

said processor is responsive to one or more exception conditions for triggering

exception processing using an exception handler, said processor being operable to

select said exception handler from among a plurality of possible exception handlers in

15   dependence upon whether said processor is operating is said secure domain of said

non-secure domain.
